Information on the Underlying

Performance of Underlying/formula/ other variable, explanation of effect on value of investment and associated risks and other information concerning the Underlying:

General: Fluctuations in the value of the Shares will have an effect on the value of the Securities throughout the life of the Securities and at maturity/expiration. The value of the Shares may go down or up throughout the life of the Securities.

Positive Correlation: All other things being equal, positive performance of the Shares will have a positive effect on the value of the Securities at maturity/expiration, and negative performance of the Shares will have a negative effect on the value of the Securities at maturity/expiration.

Equal Weighting in Basket: Equal weighting of each constituent in the basket means that the value or

performance of each constituent will have an equal influence on the value of the Securities at maturity/expiration.

FX Adjustment: The value of the Securities will be affected both by the value or performance of the Underlying and by the performance of the relevant FX rate between the currency of the Underlying and the currency of the Securities.

Greater than 100% Participation: Any decrease in the value or performance of the Underlying will have a greater negative effect on the value of the Securities at maturity/expiration than would have been the case if the Securities had been exposed to 100% of the value or performance of the Underlying.

Capital protection. The Securities are capital protected (for the avoidance of doubt, the level of capital protection of each Security may be less than 100% of the amount invested) only upon redemption at maturity. If the Securities are sold or redeemed prior to maturity, the investor will not benefit from the capital protection feature and may receive an amount which is substantially less than the capital protection amount. The capital protection amount is linked to the nominal value of the Securities or a percentage of the nominal value, as specified in the terms and conditions of the Securities, and not the issue price or the secondary market price.

Deposit Bank Event: If a Deposit Bank Event occurs, (i) the value of the Securities will fall, perhaps to as low as EUR 1, and a holder may realise little or no return on the Securities and/or (ii) the date of final redemption of the Securities may be extended beyond the Maturity Date.
